Detecting the presence or amount of conductin, at protein or nucleic acid levels, is used to diagnose tumours, while agents that (re)activate conductin are used for tumour therapy. Conductin binds to beta-catenin and induces its cytoplasmic degradation, resulting in blockade of the Wnt/Wingless signalling pathway in vertebrates. Conductin also binds to Adenomatous Polyposis Coli (APC) fragments and, in conjunction with APC, acts as a tumour suppressor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1147

Detecting the presence or amount of conductin, at protein or nucleic acid levels, is used to diagnose tumours, while agents that (rejactivate conductin are used for tumour therapy. Conductin binds to beta-catenin and induces its cytoplasmic degradation, resulting in blockade of the Wnt/Wingless signalling pathway in vertebrates. Conductin also binds to Adenomatous Polyposis Coli (APC) fragments and, in conjunction with APC, acts as a tumour suppressor.
                                                                                                                                                                                                                                                                                                                                       1361

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                who are likely to develop cancer (thyroid carcinomas). The nucleic acids are also useful for diagnosing cancer and for detecting mutations in cancerous cells. Wild type Axin, its antisense molecule and identified compounds form pharmaceutical compositions in the treatment of cancer. The compositions are also useful for treating cancer by inhibiting tumorigenesis (by inducing degradation of beta-catenin). The nucleic acid encoding Axin acts through
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     likely to develop cancer (including breast, colorectal, gastrointestinal, esophageal, carcinomas or melanomas). The wild type Axin and homologues of Axin are useful for treating subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acids encoding mutant and wild type Axin and oligonucleotides derived from them are useful for detecting mutations in the Axin gene and for determining whether a subject is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acids encoding mutant and wild type Axin and coligonucleotides derived from them are useful for detecting mutations in the Axin gene and for determining whether a subject is likely to develop cancer (including breast, colorectal, is gastrointestinal, esophageal, carcinomas or melanomas). The wild type Axin and homologues of Axin are useful for treating subjects who are likely to develop cancer (thyroid carcinomas). The nucleic acids are also useful for diagnosing cancer and for detecting mutations in cancerous cells. Wild type Axin, its antisense molecule and identified compounds form pharmaceutical compositions in the treatment of cancer. The compositions are also useful for treating cancer by inhibiting tumorigenesis (by inducing degradation of beta-catenin). The nucleic acid encoding Axin acts through negative regulation of the Wnt pathway in the Nieuwkoop Center.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

BCNG and BCNG-related CC proteins are useful in screening for compounds that modulate, interact or CC affect expression. Compounds, e.g. antagonists and agonists, identified CC in the methods are useful for modulating BCNG or BCNG-related protein CC activity. Modulation is increased or decreased ion permissivity or ion CC flow rate. Modulators of BCNG, can be used to treat a neurological, renal, CC pulmonary, hepatic or cardiovascular condition. Such conditions include epilepsy, Alzheimer's Disease, Parkinson's Disease, long OT syndrome, CC epilepsy, Alzheimer's Disease, Parkinson's Disease, long OT syndrome, CC death syndrome or pacemaker rhythm dysfunction. BCNG or BCNG-related protein can also be used to treat sensory disorders, e.g. blindness, loss of vision, loss of smell, numbness and lack of ability to taste. Also central nervous system areas that control respiration or defects in the drugs dyslexia, attention deficit disorder or learning disabilities, CC drug addiction and regulation of cell secretions. The proteins are useful targets for screening for drugs that are effective in the control of pain
                                                                                                                                                                                                                                                                                                           B

Fragments of the Ih ion channel nucleic acid are used to detect mutations e.g. for differential diagnosis. This sequence encodes a human Ih channel fragment isolated from human thalamus tissue.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel Ih ion channel, isolated from human, sea urchin, bovine, rat, and fruitfly. The ion channels of the invention have analyesic and cardioactive activity. The Ih ion channel participates in the pacemaker function in cardiac muscle. The Ih ion channel nucleic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      have analgesic and cardioactive activity. The Ih ion channel participates in the pacemaker function in cardiac muscle. The Ih ion channel nucleic acid and its encoding protein is used to identify substances (A) that modulate activity of ion channels; to treat and/or diagnose ion channel-related diseases, particularly cardiac or circulatory disorders and to prevent and/or treat cardiac/circulatory disorders (especially faulty regulation of the sinus ganglion), sleep disorders (particularly abnormal function of cortico-thalamic neurons) and/or pain. Fragments of the Ih ion channel nucleic acid are used to detect mutations e.g. for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        acid and its encoding protein is used to identify substances (A) that modulate activity of ion channels; to treat and/or diagnose ion channel related diseases, particularly cardiac or circulatory disorders and to prevent and/or treat cardiac/circulatory disorders (especially faulty regulation of the sinus ganglion), sleep disorders (particularly abnormal function of cortico-thalamic neurons) and/or pain. Fragments of the Ih ion channel nucleic acid are used to detect mutations e.g. for differential diagnosis. This sequence encodes a human Ih channel fragment isolated from human thalamus tissue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1249
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Baumann A,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     metalloprotease thrombospondin (METH) proteins METH1 and METH2

CC respectively. METH1 and METH2 have been found to be potent inhibitors of

Cangiogenesis both in vitro and in vivo. They can be used for treating

CC angiogenesis both in vitro and in vivo. They can be used for treating

CC cancer and other disorders related to angiogenesis including abnormal

CC wound healing, inflammation, rheumatoid arthritis, psoriasis,

CC macula degeneration, haemangiomas, and arterial-venous malformations.

CC They may be useful in treating deficiencies or disorders of the immune

CC system, by activating or inhibiting the proliferation, differentiation,

CC or mobilisation (chemotaxis) of immune cells. The etiology of these

CC immune deficiencies or disorders may be genetic, somatic, such as

CC cancer or some autoimmune disorders, acquired (e.g. by chemotherapy or

CC toxins), or infectious. They can also be used to treat inflammatory

CC conditions, both chronic and acute conditions. The products can also be

CC used for detection and diagnosis. Z32002 to Z32080, and Y49503 to Y49511

Fragments of the I ion channel nucleic acid are used to detect mutations e.g. for the I ion channel nucleic acid are used to detect mutations e.g. for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel Ih ion channel, isolated from human, sea urchin, bovine, rat, and fruitfly. The ion channels of the invention have analyesic and cardioactive activity. The Ih ion channel participates in the pacemaker function in cardiac muscle. The Ih ion channel nucleic

This morphogen is inactive when reduced but is active as an oxidised homodimer and when oxidised in combination with other morphogens. These morphogens are capable of stimulating proliferation of progenitor cell, stimulating the differentiation of progenitor cells, stimulating the proliferation of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Perfect score:
  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed; and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score

score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

              /note="Organ: mixed (see below); Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (melanocyte 2NbHM, pregnant uterus NbHPU, and fetal heart NbHH19W) were mixed, and sc circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 3 20232-265223, 340488-345479, and 484488-489479."

Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297480-302087, 682632-687239, 726408-728711, and 729096-731399. Subtraction by Bento Soares and M. Fatima Bonaldo. "

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         58
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 a modified polylinker; Site_1: Not I; Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (fetal lung NbHLIM, testis NHT, and B-cell NCI_CGAP_GCB1) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297480-302087, 682632-687239, 726408-728711, and 729096-731399. Subtraction by Bento Soares and M. Fatima Bonaldo. "

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               modified polylinker; ist strand CDNA was prepared from colon adenocarcinoma, and was then primed with a Not I - oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT?T3 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo. "
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /note="Organ: colon; Vector: pT7T3D-Pac (Pharmacia) with a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NDHPU, and fetal heart NDHH19W) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 260232-265223, 340488-345479, and 484488-49479."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /note-*Organ: colon; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; 1st strand cDNA was prepared from colon adenocarcinoma, and was then primed with a Not I oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo. **
